EASY OF USE AND INTUITIVE HANDLING LIGHTWEIGHT STRUCTURES

CLIMATE CONTROLLED AREA Light and robust, i-4S sun shade shelters save users' time with an easy set-up. I-4S sun shade structures are optimal for short to long term usage. Through a perforated PVC web, i-4S sun shade shelters resist to constant wind up to 90km/h and reduce sun's ray effect by more than 75% (climatic tests realized at CSTB). Thanks to adjustable height support feet, i-4S sun shade structures are adapted to protect heat sensitive equipment and vehicles of different sizes from sun's ray effect. I-4S military tents and containers are adaptable to control hygrometry and temperature levels of specific areas.
